M•E Companies Serving Ohio For Over 35 Years

M•E Companies, an Ohio based management and engineering firm, has been working with the state, local counties, townships and municipalities for over 35 years. Integrating our services throughout Ohio with three offices strategically located within shale formation areas, M•E is prepared to provide quality service to the shale exploration industry today.

TOTAL PROJECT APPROACH

M•E Companies offers our clients a technically diverse, experienced and full service engineering firm with a "total project approach." This management philosophy focuses on elements affecting the critical path of the project as well as areas that can dramatically impact the schedule and budget. As the shale industry continues to develop in Ohio, M•E has the ability to assist in key areas such as civil engineering design, water and wastewater design, field survey and mapping, property acquisition and permitting.

STRATEGIC ASSISTANCE

Our staff has strong working relationships with the **Ohio Environmental Protection Agency, the Ohio Department of Transportation, the Public Utilities Commission of Ohio and the Ohio Department of Natural Resources.** Our experience across the state allows us to have access to water supply and treatment. We can coordinate and navigate through the regulatory approvals, environmental constraints and local preferences to help our clients achieve exceptional results.

M•E also has extensive "hands-on" experience with public involvement activities. We provide complete strategic public involvement consulting, including planning, information distribution, and follow-up evaluation to stakeholder groups, federal and state legislators, the natural gas industry and the public.
